

## Fork Positioner for Forklifts

Forklift Fork Positioner - The fork positioner is a hydraulic device which could allow the individual driving to maneuver the forklift without leaving the seat. They are constructed out of high quality materials and are designed to endure the most difficult operations and work surroundings. Side shifting units have the extra ability to laterally position the entire load or the arms so as to facilitate more accurate carrying and position in a quicker and more effective manner.

The fork pocket is quite unique and enables the operator to be able to securely swing the forks into position without any worry of damaging the positioning cylinders. This allows the operator the alternative to be able to perform independent or simultaneous fork movement, depending on the job requirement. For most lift trucks with non-OEM carriages, complete carriages are required. Standard OEM carriages can be converted into blade positioners on existing units.
