

## Remanufactured Lift Truck Parts

Remanufactured Forklift Parts - Forklifts are quite pricey pieces of equipment since a brand new electric forklift unit could cost anywhere from \$18,000 to \$25,000, for a 5000lb machinery. Also, several thousands of dollars would have to be invested in a battery charger and battery. The same internal combustion lift truck of similar lift capacity will cost slightly less and the diesel models that are capable of heavier lifting capacities can cost upwards of one hundred thousand dollars. Reconditioned lift trucks are a choice in order to save much money because they cost less than half the price of brand new models.

A few purchasers may be apprehensive about buying a second-hand or reconditioned forklift in view of the fact that they feel they will have to spend more on repairs. Nonetheless, a correctly reconditioned lift truck would be able to run just as well as a new one. Though your lift will get heavy use, as long as you take good care of the equipment, it will serve your needs and probably save you lots of cash.

When considering purchasing a second-hand forklift, it is important to establish what the seller means by the term reconditioned or refurbished. Many companies do an excellent job of absolutely making over the unit before reselling it. This includes disassembling the lift truck, rebuilding the engine, sandblasting the lift and next reassembling everything and finishing with a fresh coat of paint.

To properly and meticulously rebuild a forklift engine, a good business would entirely disassemble it. A heat cleaning system could then be utilized to clean all the parts. Once this step has been completed, all of the components are checked to see if they have any defects, any breakage or any extensive wear. Some components like for instance crankshafts, cylinder blocks, connecting rods and cylinder heads are reground, resurfaced and resized if needed. Other components like for example nuts, bolts, gears and so forth. are repaired or replaced as needed.

The engine is rebuilt by hand when the overhaul has been accomplished. After putting it back together, a series of tests are applied to the working machine. This is done in order to check all of the parts to guarantee there are no issues or leaks. If any problems occur, the crucial adjustments are made.

There is no reason to be apprehensive about buying reconditioned forklifts from quality sellers. The process the machines go through to be rebuilt ensures the utmost reliability. Upkeep expenses may actually work out to be less since you would avoid the initial phase of higher upkeep projections which a new forklift has as it is broken in. By following routine maintenance schedules and taking care of the machine properly, a reconditioned lift truck will serve you well.
